

SPACEMAN DAN'S FUN SHEET

INTERNATIONAL SPACE STATION EDITION!

The International Space Station (ISS) is a space laboratory which constantly orbits the Earth. An international partnership of five space agencies from 15 countries operates the station. It has been in service since 2000 by a crew which live and work there conducting important research.

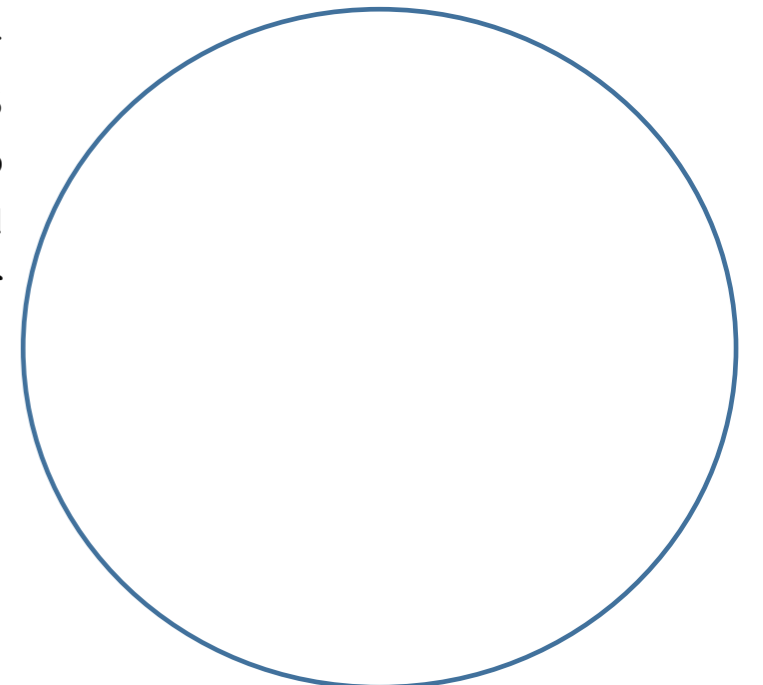

Can you label the different parts of the station from the list below?

- Solar panels
- Radiators
- Modules
- Docking port
- Robotic arm
- Docked Soyuz Spacecraft

Do you know what all these parts do?

Principia was the name given to astronaut Major Tim Peake's 6 month mission to the ISS to run experiments from December 2015 to June 2016. Every mission has a patch designed for the astronaut to wear. Can you design your own ISS mission patch?

Major Tim Peake is on a space walk outside the International Space Station (ISS). Can you add some colour to the picture?
